OCTOBER 19, 2026 · REPLACES PRODUCT BRIEF v2 OF OCTOBER 8, 2026

Tab Friendly is a mobile-friendly web app that maps bars and restaurants by the price of their cheapest drinks, so college and graduate students can plan a night out around what they want to spend. **The final version is live at tabfriendly.fabio.cool**: it covers all of Boston and Cambridge (about 500 venues), hides any price older than six months, lets anyone add or fix a price without signing in, shows opening hours, ranks by total price or price per ounce and by portion size, opens on what is around you, and rewards contributors with a leaderboard. This document records what shipped, what was dropped, and what is still to do.

01 The Idea & The User

The app maps bars and restaurants in Boston and Cambridge and labels each one with its cheapest drinks and their prices, so users can see where they can afford to drink and plan their night around it. It starts from menu and price information already published online, and users fill in missing prices or correct outdated ones, so the map keeps itself current.

It is built for college and graduate students aged 21 and over who want to keep the cost of a night out low and know what they will spend before choosing where to go. The idea and the user have not changed since the first brief.

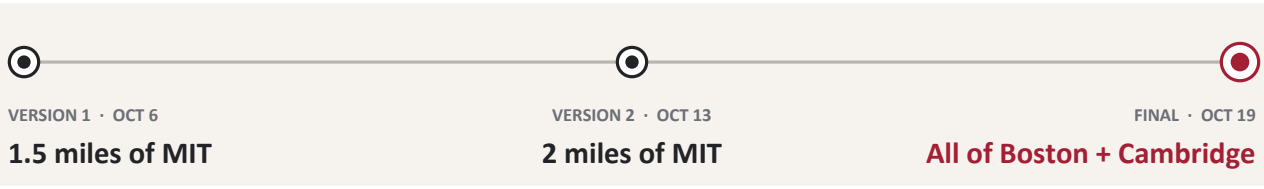

02 Where we are

AREA	BRIEF v2 · OCT 8	LIVE · OCT 19
Coverage	At least 2 miles of 77 Massachusetts Ave; final version all of Cambridge + Boston	**All of Boston and Cambridge**, plus the original 2 miles around 77 Mass Ave (parts of Somerville and Brookline): 497 venues
Hosting & access	Claude artifact; Contributor access on claude.ai	**tabfriendly.fabio.cool** on Vercel + Supabase. Anyone can post without signing in; accounts are optional. The claude.ai artifact stays as the team's dev copy
Prices per venue	Cheapest beer, cheapest mixed drink, researched full menu	Same, plus full menus at 190 venues: 10,200+ priced drinks, including 2,000 pitchers and bottles of wine
Rankings & filters	Drinks filter, beer / mixed / overall, max price	Adds a per-ounce toggle, a Size filter (personal pours vs. to share) and a list that follows the map around you
Freshness	Proposed: six months	Live: older prices leave the map, menus, Drinks filter and rankings
Hours	Proposed: weekly hours, open now	393 venues with weekly hours, an open-now badge and an "hours may vary" note
Submissions	Report a cheapest price; editors-only menus	Anyone adds or edits any menu item; votes, "Disputed" label; accounts, points and a leaderboard; 20 posts an hour per person

AREA	BRIEF v2 · OCT 8	LIVE · OCT 19
Moderation	Editors hide, restore and delete	Same, with editors signing in by email link and listed in the database

Sources: SPEC.md and README.md in github.com/fabiomn97/TabFriendly; the live database on October 19, 2026.

03 Requirements and status

1	**Menu entry from the app**	LIVE	Anyone can add a drink to a venue's menu from its card: name, type, serving, pour size and price. Entries are labeled "user-reported" with a date and feed the Drinks filter and the cheapest-price ranking.
2	**Edit any price**	LIVE	Anyone can change the price of any menu item or the cheapest beer and mixed drink. The newest entry wins, every change is dated, and editors can remove or restore items.
3	**Freshness: six months**	LIVE	A price counts for six months from its menu date, or from the date we checked it when the menu is undated. Older prices leave the map and rankings; a venue with none shows a gray "?" pin.
4	**Opening hours**	LIVE	Weekly hours on each card with an "Open now · until 1am" badge, open-now tags in the list, and "Hours may vary on holidays". Researched for 393 venues.
5	**Per ounce vs total price**	LIVE	A toggle ranks by price per ounce instead of total price. Drinks without a known pour size are left out and their venues marked "oz?".
6	**Portion sizes**	LIVE	A Size button next to Choose drinks: glass, bottle, draft and can for one person, or a bottle of wine and a pitcher to share. Rankings, filters and cards follow the choice. *Added after brief v2.*
7	**Coverage: Boston + Cambridge**	LIVE	The map, its outline and new-venue checks cover both cities plus the original 2-mile circle. 192 venues were researched beyond 2 miles; Logan airport bars past security are left out.
8	**Near you**	LIVE	The map asks for location as it opens and zooms to about 6-7 blocks around the person. Every pin stays on the map; the list and the green top 3 follow the view. *Added after brief v2.*
9	**Accounts & leaderboard**	LIVE	Optional email-link accounts with display names; a browser's anonymous posts carry over. Points are held until others confirm a price and scaled by trust, with bounties, first-price and stale-update bonuses, check-ins, weekly and monthly boards by neighborhood, and bar mayors. *Added after brief v2.*
10	**Production hosting**	LIVE	Vercel serves the app; Supabase stores the data with row-level security, live updates and a posting limit. Contributors get a silent anonymous session; editors sign in by email link. Changes go to both the live site and the claude.ai dev copy.

11	**Happy hours toggle**	DROPPED	Dropped in the v2 sprint: Massachusetts has banned drink discounts since 1984, so venues publish almost no time-limited prices.

OUT OF SCOPE

Filter by bar versus restaurant
Still deferred.

Venues outside Boston and Cambridge
Except the parts of Somerville and Brookline inside the original 2-mile circle.

04 Waiting to be done

ITEM	WHAT'S LEFT	OWNER
Custom domain	In Cloudflare, switch the tabfriendly record to DNS only (grey cloud) so Vercel manages the certificate. The site already works through the proxy.	Fabio
Research follow-up	About 60 places were dropped unverified when web searches ran out, including known bars such as Shenannigans, The Playwright, L Street Tavern, Murphy's Law and Tom English's. Only 90 of the 192 venues beyond 2 miles have a price; discovery in Hyde Park and Mattapan is thin.	Next research pass
Menus for new areas	Full menus, pitchers and bottles of wine for the 192 venues beyond 2 miles.	Next research pass
Venue status checks	Champions, DX Arcade, Marliave and Sidebar may be closed. Two unbranded "$2 beer all day" claims (Sissy K's, Wild Rover) are left off the rankings pending a check.	Editors
Price refresh plan	Researched prices from undated menus checked in October 2026 expire in April 2027. Plan a re-check before then.	Team
Leaderboard placeholders	GPS on-site bonus and the Places check are not built yet.	Zion
Dev and live data	The claude.ai dev copy and Supabase keep separate databases, and the dev copy has no leaderboard backend. Decide whether to reseed dev from live.	Team
Bot protection	Optional: add Cloudflare Turnstile to anonymous sign-in if spam appears.	Team
Pass/fail tests	Run the outside-tester checks in section 05.	Team

05 Success

6 months

Maximum age of any price shown. The v1 bar of 25 venues with a sourced cheapest-beer price is far exceeded: 227 venues have one. Each check below should pass before the course demo.

CHECK	TEST	STATUS
Freshness	A price older than six months disappears from the map and rankings; its venue shows a gray "?" pin.	TO RUN
Menu entry	A tester outside the team adds a drink in the app; it appears on the card and in the Drinks filter.	TO RUN
Price edit	A tester changes an existing menu price; the new price shows with the date of the change.	TO RUN

CHECK	TEST	STATUS
Per ounce	With the toggle on, the three green pins match a hand-ranked list of venues with known pour sizes.	TO RUN
Hours	Opening hours match venue websites in a spot check of 10 venues.	TO RUN
Range	Every researched venue in Boston, Cambridge or the 2-mile circle appears on the map (497 loaded).	MET
Sizes	"To share" ranks pitchers and bottles of wine; personal sizes leave them out.	MET
Near you	Opening the site zooms to the person; zooming out keeps every pin and widens the list.	MET

MET: verified by the team with a test copy of the app. TO RUN: built, waiting on the outside-tester check.

06 Risks and open questions

01	**Bad data with open posting.** Anyone can post without an account. Defenses are votes and the "Disputed" label, editors who hide entries, a limit of 20 posts an hour per person, and leaderboard trust scores that weigh unconfirmed posts less.
02	**Uneven research coverage.** Busy areas have many priced venues while Hyde Park, Mattapan and parts of Dorchester have few. Gray pins invite users to fill gaps, and the leaderboard pays bounties for them.
03	**Prices aging out.** Most researched prices expire together in April 2027. Without a re-check the map will thin out suddenly.
04	**Per ounce needs pour sizes.** Menus often omit sizes, so the per-ounce view ranks fewer venues than the total-price view.
05	**Hours go stale.** Holidays and one-off closures will not show; the card says hours may vary.
06	**Inferred share-size prices.** Some wine lists print two unlabeled prices; we took the larger as the bottle price, noted per venue.
07	**Two databases.** The dev copy and the live site drift apart over time. Editors must work on the live site.
